Running your website has never been easier!

- Admin-Hosting offers you as a client an easy way to have full control over your site. With cPanel and WHM, you choose which applications handle services such as DNS, Redirects, Mail accounts, Backups, which versions of Apache and PHP to run, and a wide variety of other functionalities.

- Website owners can password-protect portions of their sites and have the accounts of visitors who share their passwords automatically deactivated.

- Our software also offers hotlink protection and the ability to deny problem IP addresses.

- All packages include an experienced support team standing by 24/7/365 to help you out with anything you need!

- Our servers always use the latest updates of Apache, PHP, Mysql, Python, Pearl and any other service needed for your website.

- Included in all our packages are the Fantastico one-click-install control panel that allows you to install a wide variety of popular scripts in just a few minutes.

- With us you will always receive a professional and fast support. No client is too small or too big. We answer within a few hours max! Often directly.

- Admin-Hosting exclusively uses the fastest and most secure servers in the world for your websites. No expenses are saved on hardware and maintenance!

- Our datacenters are protected against all kinds of possible attacks or disasters and are constantly backed up.

- We believe that a good client is a happy client. The best way of assuring that we grow and expand is to treat customers the same way we would like to be treated ourselves. Sign up for a starter package and start your business, community or personal website today!
